

The NAPM - Metro Detroit Purchasing Managers index contracting 47.6

Detroit Index: After expanding for 2 months, the overall NAPM-MD Index fell back sharply in November to 47.6, indicating a contraction in the local manufacturing sector.

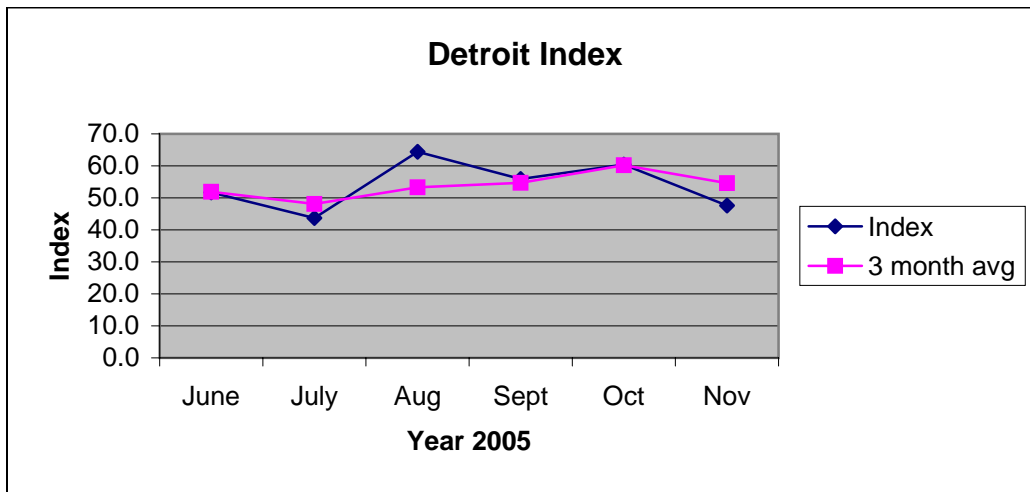

Employment: November experienced a significant decline in the monthly index (38.9), indicating a contraction in employment.

Production: November's production index weakened to 50.0.

Prices: After hitting a high in October, November prices eased somewhat, but still remain at high levels (72.2)

Commodities up/down in price: Oil and petroleum prices remain high. One reporter indicates that acrylics, paints and aluminum are all high. Reporters indicate mixed signals on packaging prices. Lower diesel fuel and natural gas prices were reported. One supplier noted deliveries are taking longer due to shippers' freight consolidations to save fuel.

Hurricane Impacts: About 16% of the reports indicate supply chain problems still exist due to the 2005 hurricane season impacts. Some note an inability to ship to certain UPS zones, with some shipments halted. Reporters indicate business disruptions due to the lack of or allocation of industrial gasses. Freight shipments to and from the region have had to be rerouted, with a resulting time delay and cost increase. Some reporters anticipate effects will be felt in the coming months due to cuts in manufacturing output.
