How to Connect a MacBook Pro to a Projector

DVI Port on Laptop

VGA Cable from Projector

DVI to VGA Cable
Click on the Apple menu and select "System Preferences..."

Select "Displays."
Before proceeding, ensure that the projector is on.

Check "Show displays in menu bar."

Close out of display preferences.

Click on the displays icon in your menu bar.
Click “Detect Displays” to connect to the projector.

You should now see the MacBook Pro’s desktop on the projection screen!

Mirroring displays the same desktop on both screens. Select “Turn Off Mirroring” to extend your desktop onto projector screen.
